

POOL FILTRATION MEDIA

- 100% Recycled Glass
- For ALL Sand Filters
- More Surface Area
- Filters Cleaner
- Lasts Longer

WHY GLASS IS SUPERIOR TO SAND

- The coarse nature of glass is effective for trapping dirt and impurities in the filter, offering greater filtration power.
- Glass is less porous so it doesn't become saturated and counteracts algae build-up, which keeps your filter cleaner for longer.
- Glass has a lower density than sand - less is more.
- Glass has also been known to remain effective for much longer than sand
